

Get all in one.

AXIS F34 Surveillance System is a discreet, four-camera surveillance solution ideal for small stores and offices. The necessary hardware for setting up the system is included in the sales unit, while the video management software is free for download on a PC and mobile devices. All the components, from cameras to storage and video management, are fully integrated for optimal installation and use.

Equipment included

4x AXIS F1004 Sensor Unit
4x AXIS F7315 Cable White 15 m
for connection between main and sensor unit

1x AXIS F34 Main Unit
1x Mains adaptor
that powers the whole system

2x AXIS Surveillance microSDXC Card 64 GB
for 1-2 weeks of storage

4x AXIS F8214
for surface mounting
4x AXIS F8224
for recessed mounting

AXIS Camera Companion 3
PC client and mobile apps

The PC client for AXIS Camera Companion is free for download.

The mobile viewing apps for AXIS Camera Companion are free for download for both iOS and Android.

Benefit from the divided concept

The divided concept, where the IP-camera's main unit is separated from the lens and image sensor, has several benefits. The thumb-sized sensor unit and mounting accessories allows for discreet installation on surfaces or recessed ceilings. Two different types of mounting accessories are included in the sales unit - so you can choose the preferred mount on site. The small, lightweight main unit

allows for placement in a convenient location. The maximum distance between each sensor unit and the main unit - limited by the cable length - is 15 m or 49 ft. Thus the placement of sensor units can be up to 30 m or 98 ft apart. All four sensor units are powered through the main unit, so there is no need for separate power sources or a PoE switch.

How it works
